

Wireframes

Anurati Sodani

Why I chose this topic?

Even though we went over the theory of this, it was still unclear to me and some others in my class, from my understanding, regarding what actually went into wireframes.

I explained my topic creating wireframes for a project that I worked on this semester.

Wireframes

Visual guide that represents the skeletal framework of a website

Aim of a wireframe is to provide a visual understanding of a page early in a project to get stakeholder and project team approval before the creative phase gets under way

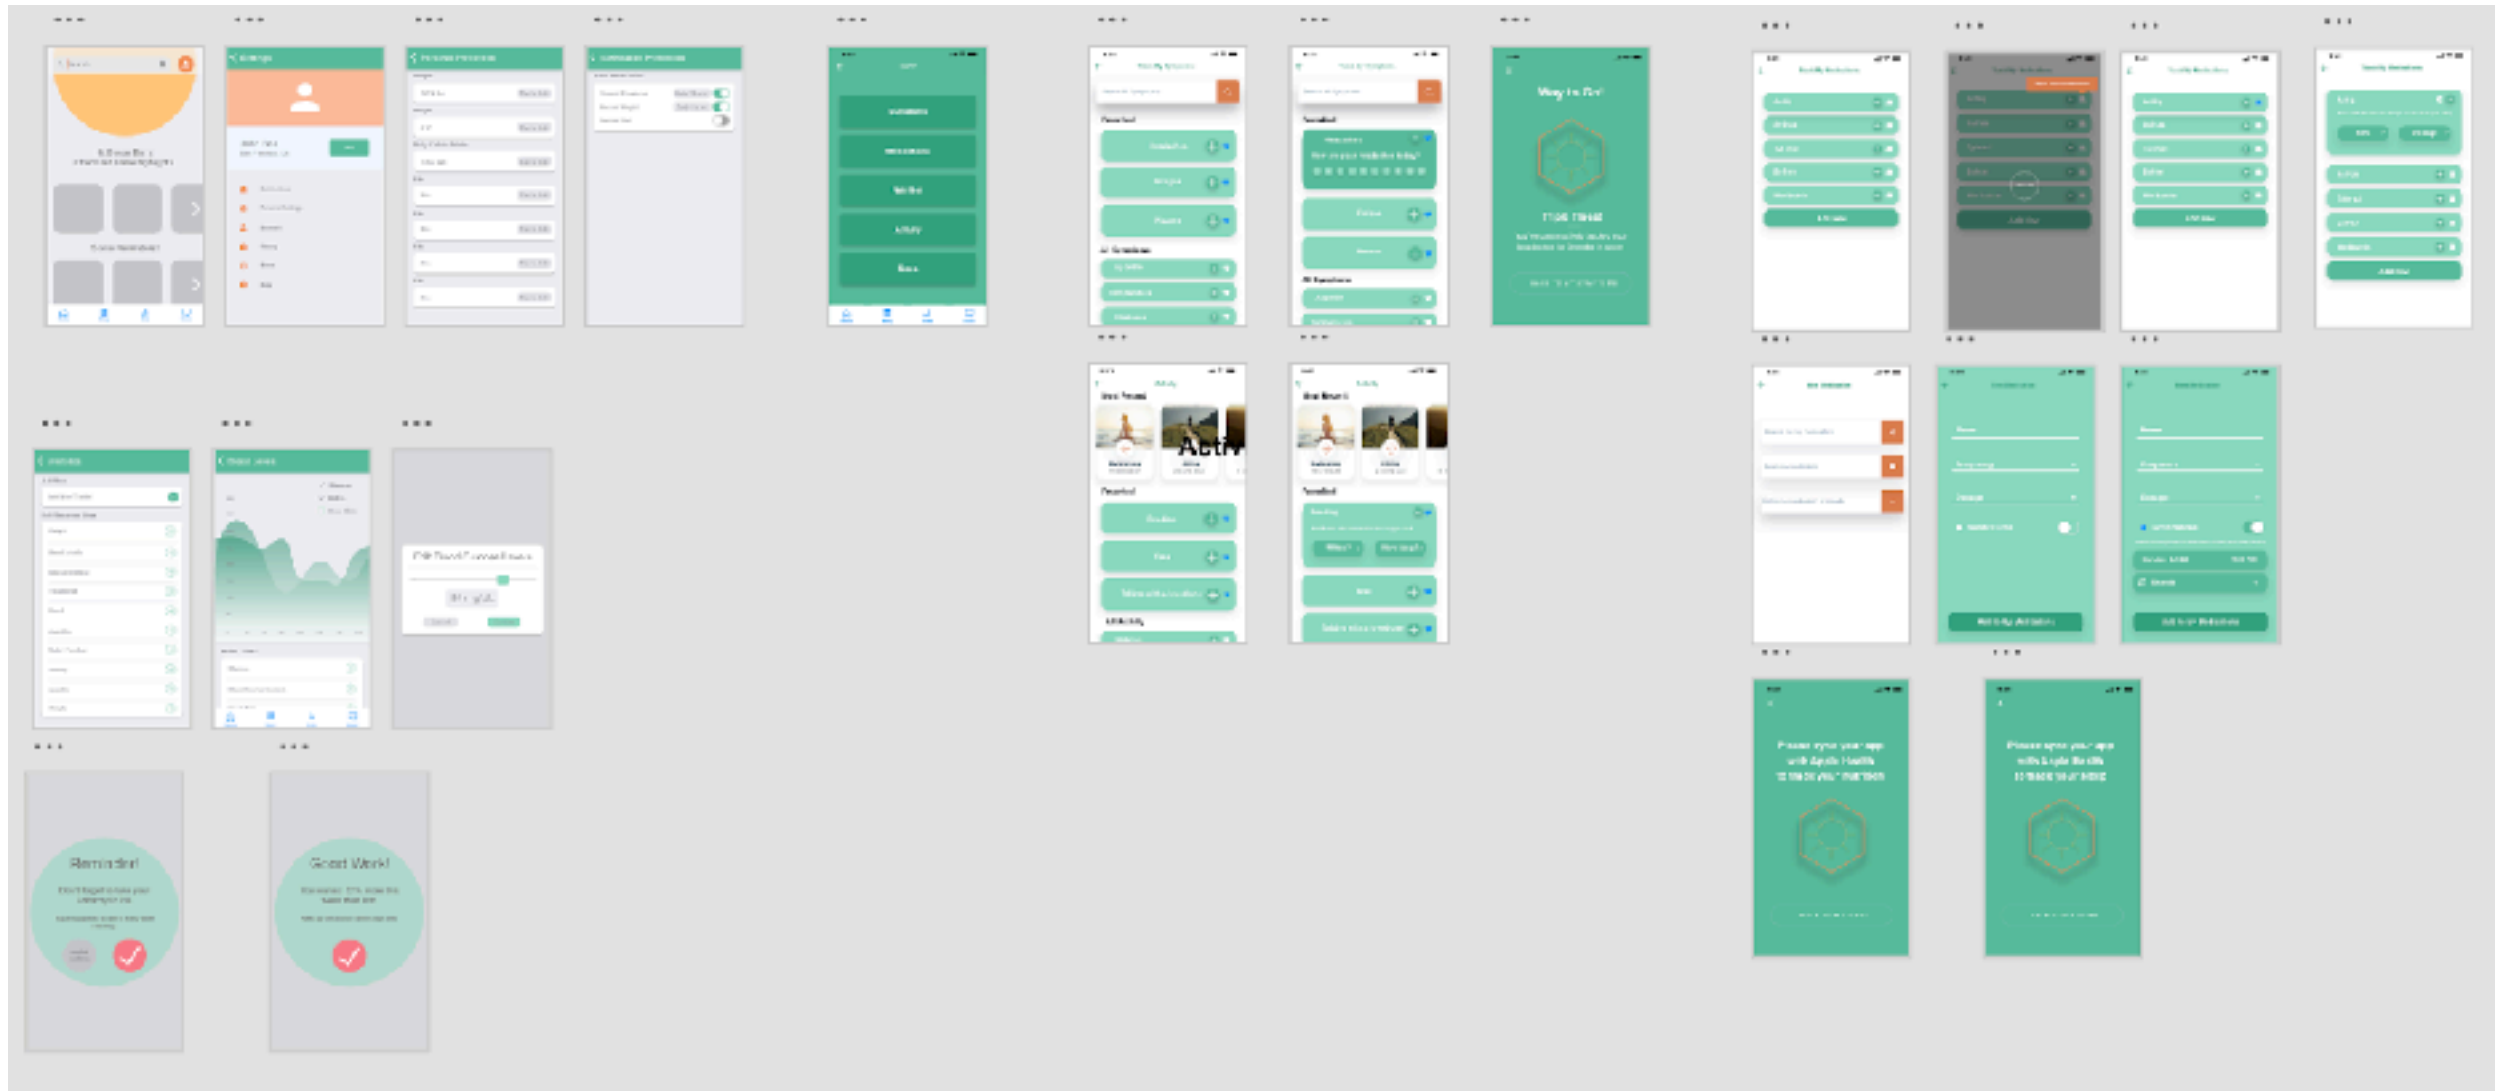

Quicker and cheaper to review and amend the structure of the key pages in a wireframe format

Often used to complete the User Centered Design process, wireframes are also used at the beginning of the design phase

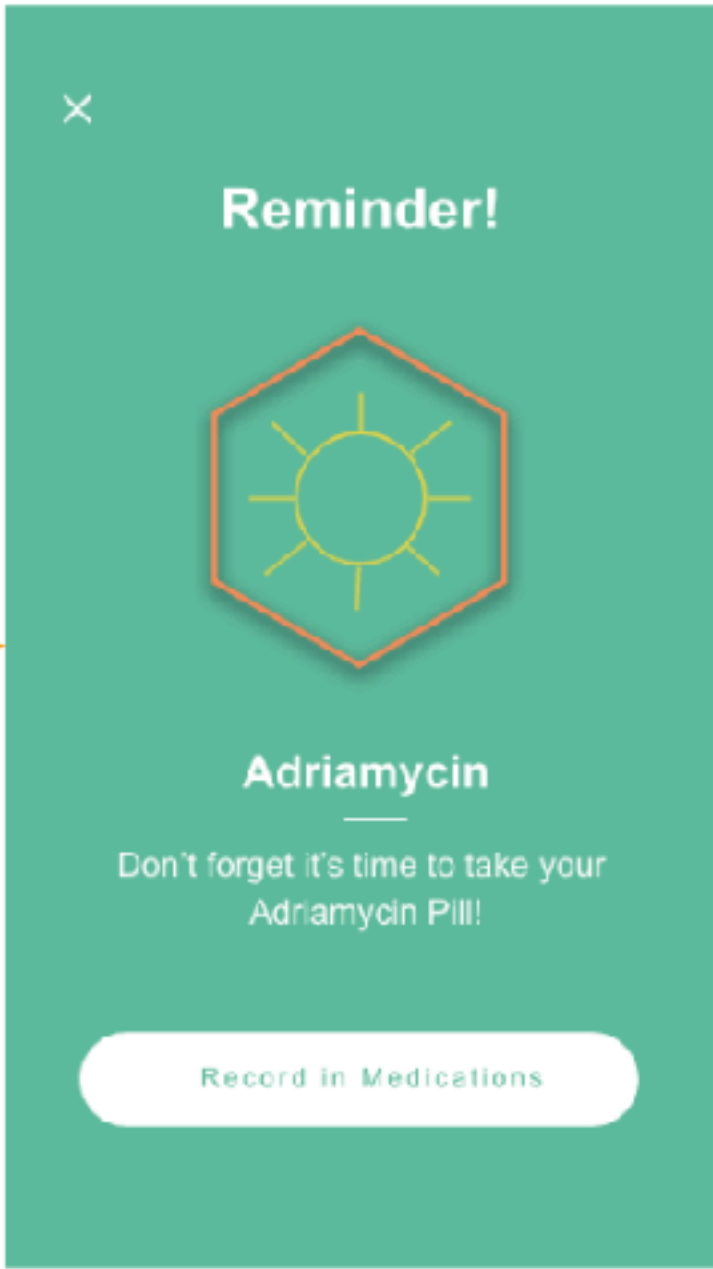

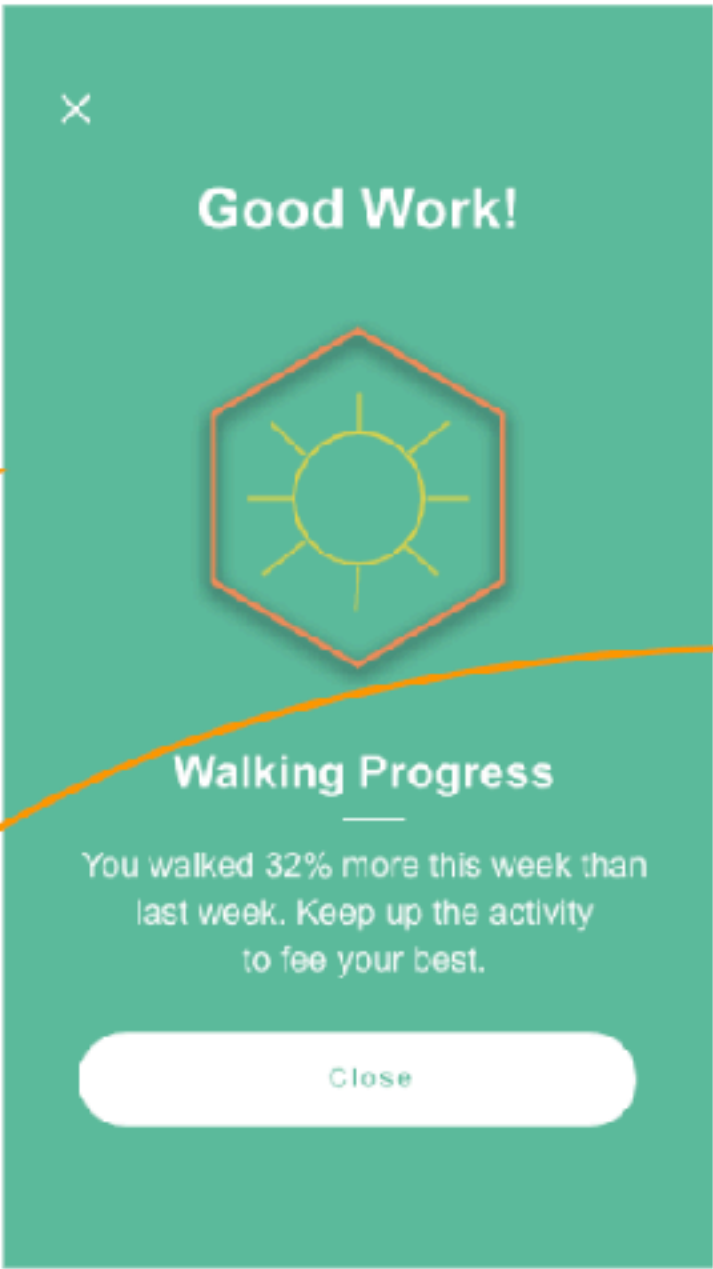

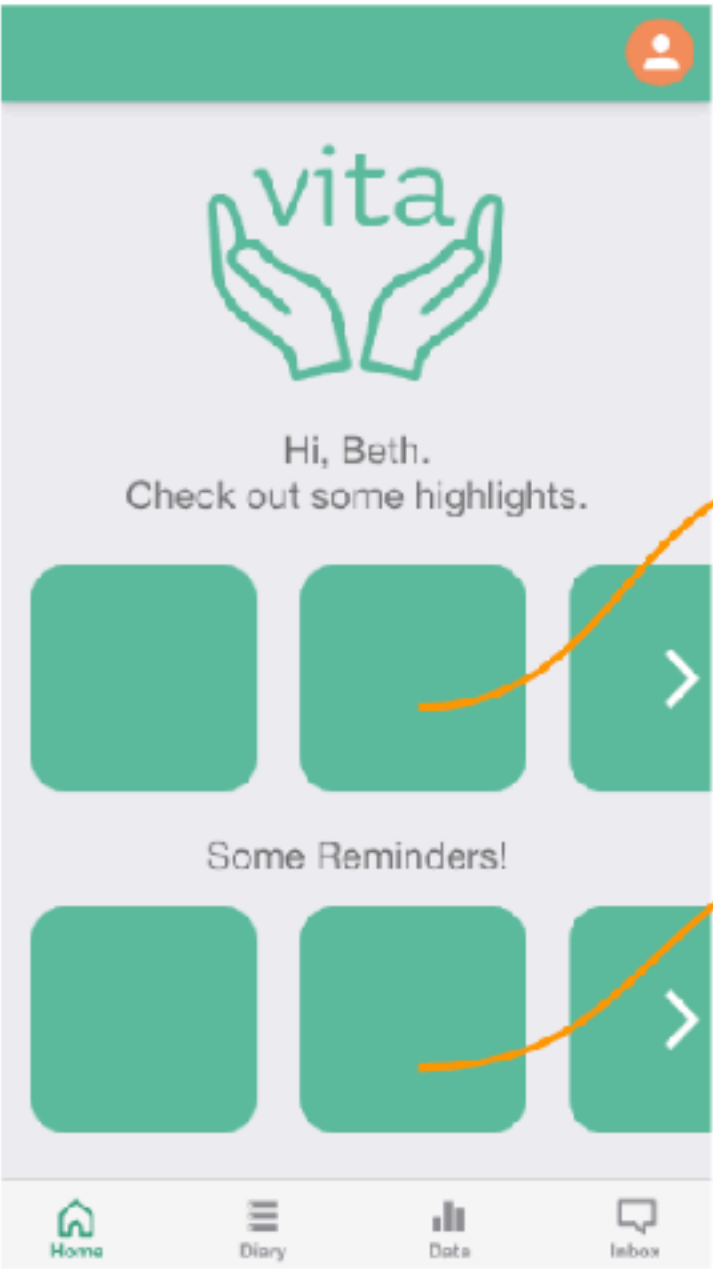

Project Scope

- Allow patients to enter symptoms, medications, etc.
 - Later: images and videos
 - Later: suggestions for symptom relief
- Prompt patients to enter data
- Display summary of symptom data
- Focus primarily on interface for patients
 - Later: interface for doctors
- Start with same interface for all cancers
 - Later: filters for specific cancers

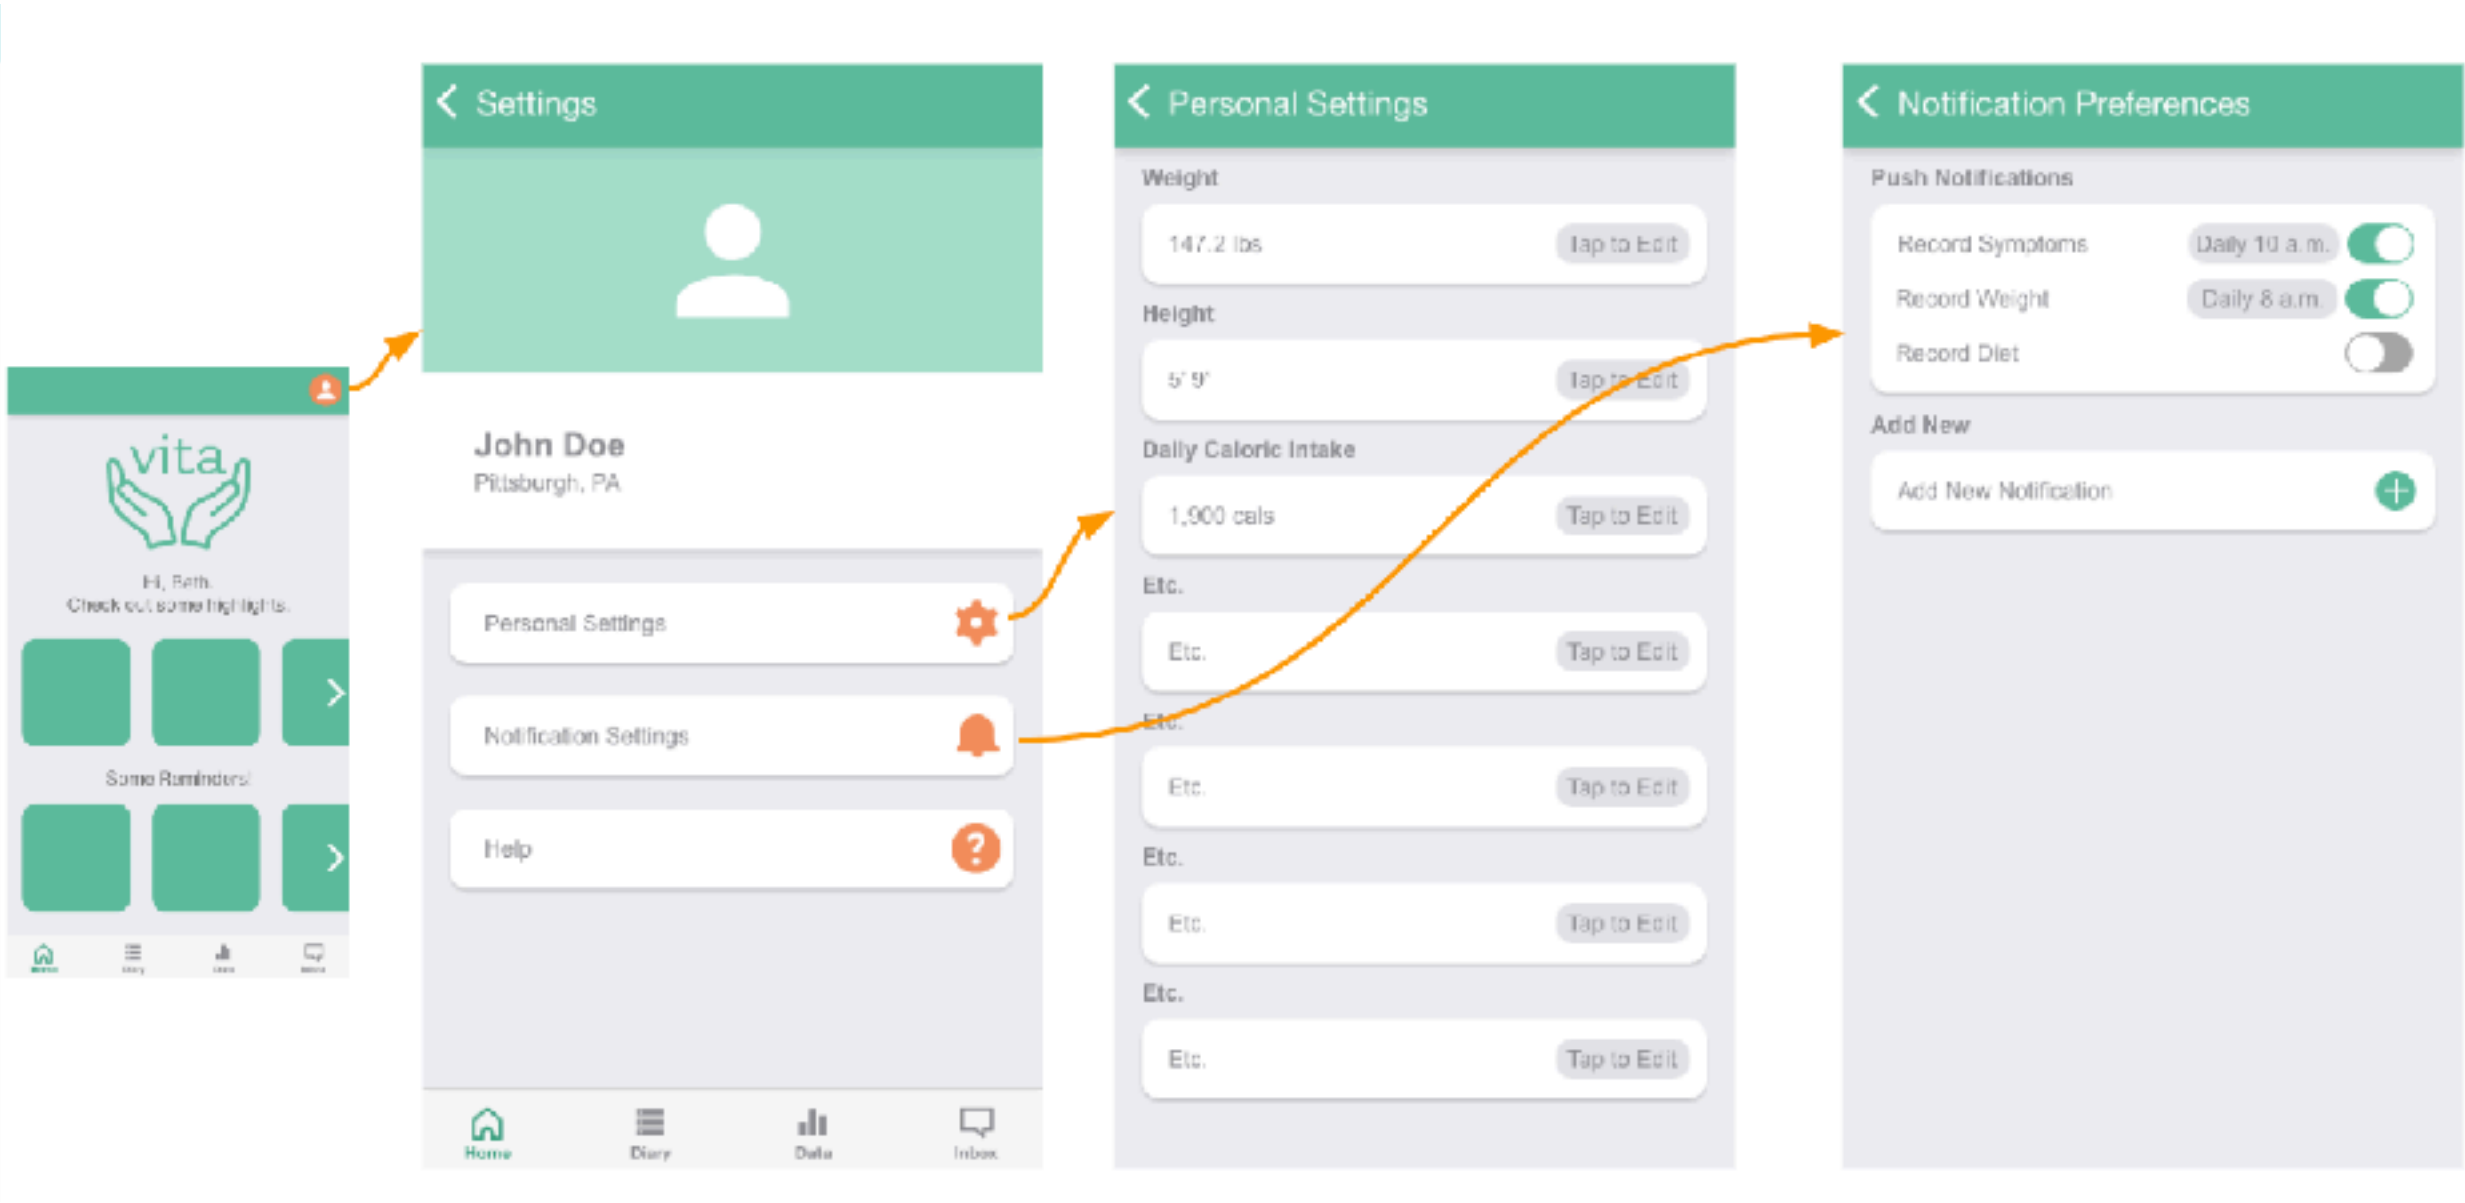

Overall wireframe layout

Wireframes

Useful Evaluation especially when conducting user studies, when getting to the translating design to code stage it is helpful to get feedback because a lot hard to change after already coding.

It is also good to transform your initial ideas of drawing and thoughts into a working prototype.
